

OVERVIEW

AKWOS, in partnership with CECI and Kvinna Till Kvinna, hosted a community sports and dialogue event to mark the IDRW 2025.

It was held under the UN theme “**Rural Women Sustaining Nature for a Collective Future**,” and Rwanda’s national theme: **Umugore ni Uwagaciro - (A Woman is Valuable)**. 111 women were in attendance.

Objectives:

1. Recognise the role of local actors and communities as role models in climate adaptation and mitigation.
2. Develop a more inclusive understanding of climate solutions (especially how small-scale, low-tech, or traditional solutions are effective).
3. Establish a heightened sense of urgency on climate issues and the need for community driven action
4. Enhanced community awareness and understanding of climate and environmental challenges.

Recommendations

- There is a need for more in-depth tailored sessions and potential mentorship programmes focused on personal action and impact that starts small. This will help participants connect personal actions with broader impacts.
- Framing of concept notes, activities, and survey questions could be improved. Instead of focusing on abstract terms like “climate,” the team could adopt relatable language such as “community development” or “earning money due to high cost of living” to address day to day challenges. As a result, some key understandings were lost in translation.

METRICS

Understanding of
environmental problems

Awareness of
environmental solutions

Knowledge of personal
environmental actions

Motivation to engage in
climate-related actions

Satisfaction score

DEDUCTIONS FROM METRICS

A moderate improvement, indicating that participants strengthened their general understanding of climate and environmental challenges after the session.

The largest improvement, suggesting the session was particularly effective in helping participants understand what solutions exist and likely how they can contribute to them.

A notable improvement in participants’ awareness of the actions they can personally take to protect the environment and reduce climate risks.

Although the change was small, participants still showed a positive shift in motivation, meaning the session helped reinforce their willingness to act, despite the modest increase.

Participants were highly satisfied with the session, which supports the overall effectiveness and relevance of the session

“It was inspiring to see all the women attentive, active, committed, and eager to discover new knowledge. If they continue to receive close guidance, they will surely go far.”

-Jean Marie,
CECI Climate and Agriculture Expert

“I was so happy and excited to see women turning challenges into opportunity.”

-Peace, Safer Rwanda
